Information about the exercise:

EXERCISE IS NOT MORE IMPORTANT THAN NUTRITION, BUT IT IS AN ESSENTIAL FACTOR IN YOUR JOURNEY AND AN INTEGRAL PART OF THE REGIMEN.
YOUR EXERCISE IS THE SIGNAL OF CHANGE THAT YOUR BODY RESPONDS TO, AND NUTRITION DETERMINES THIS RESPONSE.
YOU WILL EXERCISE WITH A PRECISE REGIMEN DESIGNED FOR YOU AND WITH PRECISE INTENSITY AND PERFORMANCE, SO YOUR BODY'S ABILITY TO CHANGE WILL BE SOMETHING TO BE EXPECTED.
EXERCISE DETERMINES HOW YOUR BODY USES YOUR FOOD BY DISTRIBUTING NUTRIENTS DIFFERENTLY THAN SOMEONE WHO DOES NOT EXERCISE.
YOUR INTEREST IN EXERCISING AND INCREASING MUSCLE MASS WILL RESULT IN MAJOR CHANGES IN YOUR APPEARANCE.
YOUR EXERCISE WILL BE BALANCED IN A SCIENTIFIC MANNER SO THAT IT STIMULATES AND ENGAGES ALL THE MUSCLES IN YOUR BODY. THIS IS BECAUSE I WILL NOT BE SATISFIED WITH JUST A SCHEDULE THAT YOU FOLLOW, AND THAT'S IT, I WILL CARE MORE ABOUT HOW YOU IMPLEMENT THIS SCHEDULE!

HOW DO YOU PROGRESS IN EXERCISE?

MUSCULAR DEVELOPMENT IS YOUR BODY'S WAY OF GETTING USED TO THE LOAD OR STRESS YOU EXPOSE IT TO.
YOUR BODY DOESN'T UNDERSTAND REPS, SETS, OR WEIGHTS, AND IT DOESN'T CARE THAT YOU GAIN MUSCLE.
THINK OF YOUR BODY IN GENERAL AS A TOOL FOR ADAPTATION AND HABITUATION, AND ITS PRIMARY INTEREST IS THAT YOU REMAIN IN A STATE OF PHYSICAL BALANCE INTERNALLY AND EXTERNALLY.
YOUR BODY WILL NOT DEVELOP UNLESS YOU GIVE IT A REASON FOR DOING THIS, ESPECIALLY IN MUSCLE BUILDING BECAUSE IT IS A VERY EXPENSIVE PROCESS FOR YOUR BODY. IT INCREASES THE SIZE OF MUSCLE TISSUE AND REQUIRES PATIENCE AND EFFORT ON YOUR PART, BUT AS LONG AS YOU ADHERE TO THE PRINCIPLE OF GRADUALLY INCREASING THE TRAINING LOAD, YOU WILL ALWAYS SURROUND YOUR BODY IN AN ENVIRONMENT SUITABLE FOR IT TO BUILD. MUSCLES.

HOW DO YOU APPLY A GRADUAL LOAD FOR EXERCISE?

IT IS POSSIBLE THAT AFTER READING THE ABOVE, YOU MIGHT THINK THAT YOU NEED TO INCREASE YOUR WEIGHT OVER TIME, AND I WOULD LIKE TO REASSURE YOU THAT WHAT YOU ARE SAYING IS CORRECT! BUT LET ME INFORM YOU THAT THERE IS MORE THAN ONE WAY TO INCREASE PRESSURE ON YOUR MUSCLES IN ADDITION TO ADDING WEIGHT, BECAUSE YOU ALWAYS ADD WEIGHT IN CERTAIN EXERCISES THAT ARE NOT THE EASIEST THING, ESPECIALLY IF ISOLATION EXERCISES FOR SMALL MUSCLES SUCH AS THE SHOULDER, FOR EXAMPLE, I WILL NOT EXPLAIN THESE METHODS TO YOU SEPARATELY BECAUSE IN REALITY YOU MUST MIX BETWEEN ALL OF THEM.
WHEN YOU HAVE A SPECIFIC REP RANGE, SUCH AS 10-15, FOR EXAMPLE, YOU WILL START WITH A WEIGHT THAT YOU CAN DO 10 REPS WITH, NO MORE. THIS MEANS THAT THE WEIGHT YOU CHOOSE WILL BE HEAVY ENOUGH SO THAT YOU CAN GET 10 REPS WITH IT, GIVEN THAT YOU HAVE PUT IN THE EFFORT.

OVER TIME, IF YOU KNEW WITH THIS SAME WEIGHT THAT INSTEAD OF DOING 10, YOU WOULD DO 12 OR 15, THEN YOU WERE ABLE TO INCREASE THE TRAINING LOAD AND THUS YOU BECAME STRONGER AND YOUR MUSCLES GREW IN EACH SET. ALWAYS TRY TO DO MORE REPS THAN THE PREVIOUS SET.

WHAT IF YOU REACH THE END OF THE EQUIPMENT RANGE?

USING OUR EXAMPLE, WHEN OVER TIME YOU REACH A MAXIMUM OF 15 REPS WHILE PLAYING, FOR EXAMPLE, CONSIDER YOURSELF READY TO ADD ENOUGH WEIGHT TO ALLOW YOU TO GO DOWN AGAIN FOR 10 REPS, AND WORK WITH THIS WEIGHT UNTIL YOU INCREASE YOUR REPS TO 15 AGAIN, AND SO ON.

TRY TO ENSURE THAT THE NEW WEIGHT THAT YOU WILL BE PLAYING WITH DOES NOT TAKE YOU OUT OF YOUR REP RANGE. IT MEANS THAT IT WILL BE LIGHTER, BUT IT WILL NOT TAKE YOU BELOW THE MINIMUM SET OF REPS. THE GAME HERE IS THAT YOU INCREASE YOUR STRENGTH WITHIN THE REP RANGE THAT IS WRITTEN FOR YOU.

PROVIDED THAT YOU DO NOT INCREASE WEIGHT UNTIL YOU COMPLETE THE RANGE OF REPS IN YOUR EXERCISE, MEANING THAT YOU DO NOT INCREASE BEFORE YOU REACH 15, AND ANOTHER CONDITION IS THAT YOUR INCREASE IN WEIGHT AND REPS DOES NOT COME AT THE EXPENSE OF YOUR TECHNIQUE. YOUR EQUIPMENT MUST BE CLEAN AND YOUR PERFORMANCE MUST BE CORRECT SO THAT THE PRESSURE YOU PUT ON YOUR MUSCLES HAS A DIRECTED EFFECT ON THEM, MAKING THEM REALLY STRONGER AND BIGGER.

HOW DO YOU CHOOSE THE RIGHT WEIGHT?

AN ALMOST GENERAL RULE IS THAT YOU CHOOSE A WEIGHT THAT ALLOWS YOU TO COMPLETE YOUR REPS, AND YOU HAVE ONE OR TWO REPS REMAINING IN THE TANK BEFORE YOU COMPLETE THE LAST.

IF THERE IS AN EXERCISE THAT YOU DO NOT KNOW HOW TO ADD WEIGHT TO:

HERE WE WILL INCORPORATE ANOTHER METHOD TO INCREASE THE TRAINING LOAD, WHICH IS TO REDUCE THE REST TIME BETWEEN SETS. FOR EXAMPLE, IF YOU REST 3 MINUTES IN THIS EXERCISE, MAKE THEM TWO MINUTES OR LESS. YOU ARE PUTTING PRESSURE ON THE MUSCLE THAT YOU YOURSELF WILL FEEL WITHOUT NECESSARILY GAINING WEIGHT. IN A WAY, YOU HAVE EXPOSED YOUR BODY TO NEW PRESSURE, SO NEXT TIME YOU WILL BE STRONGER.

WHAT DO I FEEL COMFORTABLE WITH BETWEEN EACH GROUP?

TAKE IT AS A GENERAL RULE THAT IF YOU ARE STILL APPROACHING, YOU ARE NOT READY TO FEAR THE NEXT GROUP. BECAUSE NOT ALL EXERCISES ARE STRESSFUL IN THE SAME WAY, WE WILL DIVIDE THE REST PERIOD INTO TWO CASES:
1- ISOLATION EXERCISES, OR ONES IN WHICH YOU TARGET ONE MUSCLE AND MOVE ONE JOINT, SUCH AS BICEPS AND TRICEPS EXERCISES, FOR EXAMPLE, WILL REST FROM A MINUTE TO A MINUTE AND A HALF.

2- COMPOUND EXERCISES THAT WORK MORE THAN ONE MUSCLE AND MORE THAN ONE JOINT, SUCH AS PULLING EXERCISES FOR THE BACK OR PUSHING FOR THE CHEST, TAKE YOU FROM A MINUTE AND A HALF OF REST FOR UP TO 3 MINUTES.

DON'T LET THESE NUMBERS PREVENT YOU FROM RESTING A LITTLE MORE IF YOU FEEL YOU NEED IT, BECAUSE NOT EVERY DAY YOUR MENTAL AND PHYSICAL ENERGY WILL REMAIN AT THE SAME LEVEL, AND ALWAYS REMEMBER THAT YOUR EQUIPMENT AND PERFORMANCE ARE MORE IMPORTANT THAN THAT YOU CONTROL THE NUMBER BY A HAIR'S BREADTH.
IF YOU TAKE A MINUTE AND A HALF, FOR EXAMPLE, AND FEEL THAT YOU NEED HALF A MINUTE OR A MINUTE MORE TO KNOW HOW TO GIVE YOUR MAXIMUM EFFORT IN THE NEXT SET, DO THAT.

WARM-UP:

WARMING UP YOUR JOINTS AND SHOULDER LIGAMENTS, AS SHOWN IN THE PICTURE, IS VERY IMPORTANT, AS WELL AS THE PELVIC JOINT ON THE DAYS WHEN YOU WILL EXERCISE LEGS. ALWAYS TRY TO WARM UP THROUGH DYNAMIC STRETCHES, WHICH MEANS NOT STATIC STRETCHING, SUCH AS PINNING YOUR SHOULDER IN A CERTAIN POSITION TO TIGHTEN IT.

BECAUSE THIS RELAXES MUSCLE TISSUE AND REDUCES THE STRENGTH OF ITS REBOUND UNDER PRESSURE, YOU MAY EXPOSE YOURSELF TO INJURY, SO ALWAYS ENGAGE IN KINETIC STRETCHES, SUCH AS CIRCULAR MOVEMENTS OF YOUR JOINTS, AND SO ON.

BUT THE MOST IMPORTANT TYPE OF HEATING AND THE MOST BENEFICIAL TO YOU REMAINS WARMING UP THE MUSCLE YOU ARE GOING TO EXERCISE DIRECTLY DURING THE EXERCISE YOU ARE GOING TO DO.

BEFORE YOU START WITH THE WEIGHT YOU WILL BE PERFORMING WITH, I FIRST WANT YOU TO START WITH LESS THAN HALF OF THIS WEIGHT AND DO THE SAME REPS THAT YOU INTENDED TO DO WITH THE USUAL WEIGHT.
I MEAN, IF YOU NORMALLY PLAY WITH A 30 DUMBBELL, FOR EXAMPLE, 12 REPS, YOU WILL WARM UP WITH 15 KILOS, ABOUT 12 REPS.
IT IS PREFERABLE TO PLAY A WARM-UP SET WITH A SLIGHTLY HIGHER WEIGHT, BUT WITH FEWER REPETITIONS. THE GOAL HERE IS NOT TO EXERT YOURSELF, BUT RATHER TO PUMP BLOOD INTO THE MUSCLE AND PREPARE YOURSELF AND YOUR JOINTS FOR THE MOVEMENT THAT YOU ARE ABOUT TO PERFORM WHEN YOU START PLAYING WITH YOUR BASIC WEIGHTS.

And always don›t warm up less than two sets!

THE MUSCLE IS HEATED ONLY ONCE. THIS MEANS THAT IF ON THIS DAY YOU DO MORE THAN ONE EXERCISE FOR THE SHIN MUSCLE, THEN IN THE SECOND EXERCISE YOU WILL NOT NEED TO WARM UP FROM THE BEGINNING LIKE THE FIRST EXERCISE BECAUSE YOU HAVE ALREADY WARMED UP AND PLAYED,
BUT YOU CAN ALSO DO A LIGHT SET THAT WILL QUALIFY YOU FOR THE MOVEMENT THAT YOU WILL EXERCISE OR HELP YOU CHOOSE THE WEIGHT.
THE BASIC ONE YOU CAN PLAY WITH IF YOU NEED TO.

DAY 1: PUSH

EXERCISE	SETS	REPS	REST
30-DEGREE INCLINE SMITH MACHINE	3	8-12 reps	2-3 min
FLAT DB PRESS	3	8-10 reps	2-3 min
SA CABLE LATERAL RAISE H-WRIST	3	8-12 reps	2-3 min
SA CABLE OHT EXTENSION	3	6-10 reps	2-3 min
SA CROSS-BODY TRICEPS EXTENSION	3	8-12 reps	2-3 min
DEAD BUG	3	AMRAP	1.5-2 min

DAY 2: PULL

EXERCISE	SETS	REPS	REST
UPPER BACK PULLDOWN	3	8-10 reps	2-3 min
SA CABLE ILIAC PULLDOWN	3	10-12 reps	2-3 min
CROSS-CABLE REAR DELT FLY	3	8-12 reps	2-3 min
DB SHRUGS	3	10-12 reps	2-3 min
FACE-IN CABLE CURL	3	12-15 reps	2-3 min
INCLINE DB CURL	3	12-15 reps	2-3 min
PLANK	3	AMRAP	30-60 sec

DAY 3: LEGS

EXERCISE	SETS	REPS	REST
LEG PRESS MACHINE (QUADS)	4	10-12 reps	2-3 min
DB RDL	4	10-12 reps	2-3 min
LEG EXTENSION MACHINE (QUADS)	3	12-15 reps	2-3 min
LEG CURL MACHINE	3	10-12 reps	2-3 min
STANDING CALF RAISE MACHINE	4	10-12 reps	2-3 min
BIRD DOG	3	AMRAP	1.5-2 min

DAY 4: PUSH 2

EXERCISE	SETS	REPS	REST
CHEST PRESS MACHINE	3	8-12 reps	2-3 min
SEATED COSTAL CABLE PRESS	3	8-12 reps	2-3 min
NG SHOULDER PRESS MACHINE	3	8-12 reps	2-3 min
DB LATERAL RAISE	3	8-12 reps	2-3 min
CROSS-CABLE OHT EXTENSION	3	8-12 reps	2-3 min
CROSS-CABLE TRICEPS EXTENSION (TRICEPS)	3	8-12 reps	2-3 min
SIDE PLANK	2	AMRAP	2-3 min

DAY 5: PULL 2

EXERCISE	SETS	REPS	REST
SA CABLE ILIAC PULLDOWN	4	8-12 reps	2-3 min
CHEST SUPPORTED DB ROW	3	8-12 reps	2-3 min
SA CABLE LAT PULLOVER	3	12-15 reps	2-3 min
CROSS-CABLE REAR DELT FLY	2	10-12 reps	2-3 min
INCLINE DB CURL	3	10-12 reps	2-3 min
FACE-IN CABLE CURL	3	10-12 reps	2-3 min

DAY 6: LEGS 2

EXERCISE	SETS	REPS	REST
HACK SQUAT MACHINE (QUADS)	3	8-10 reps	3-5 min
LEG CURL MACHINE	3	10-12 reps	2-3 min
SEATED CALF RAISE MACHINE	3	12-15 reps	2-3 min
HEEL ELEVATED GOBLET SQUAT	2	10-12 reps	2-3 min
LEG EXTENSION MACHINE (QUADS)	3	10-12 reps	2-3 min
SEATED HIP ADDUCTION MACHINE	3	10-12 reps	2-3 min

Information about cardio:

CARDIO ALONE DOES NOT BURN FAT, BUT IT HELPS US IN EQUALIZING CALORIES SO THAT WE CAN BURN MORE CALORIES, AND THUS IT REMAINS A POWERFUL TOOL FOR US, ALONG WITH DIET AND EXERCISE, TO REACH OUR GOAL IN AN INTEGRATED MANNER.
BUT THE BENEFITS OF CARDIO ARE NOT ONLY THAT IT IS A TOOL FOR BURNING CALORIES! CARDIO IMPROVES BLOOD CIRCULATION ACTIVITY AND MAKES A BIG DIFFERENCE IN IMPROVING YOUR BODY'S ABILITY TO BREAK DOWN FOOD PROPERLY AND BETTER DISTRIBUTE THE NUTRIENTS THAT ENTER FROM FOOD.

CARDIO ALSO IMPROVES YOUR PERFORMANCE IN THE BARBELL EXERCISE, BECAUSE WHEN YOUR RESPIRATORY SYSTEM IS ACCUSTOMED TO MODERATE-INTENSITY EFFORT, YOU WILL FIND YOURSELF EXERCISING LESS BETWEEN EACH SET AND THE NEXT, AND YOU WILL NOT GET TIRED OR FEEL FATIGUED AS QUICKLY.

DO I DO MY CARDIO BEFORE OR AFTER EXERCISE?

YOU ALWAYS HAVE FRIENDS TO DO YOUR CARDIO WITH.
OR AFTER EXERCISE, OR AT ANY OTHER TIME IN YOUR DAY OUTSIDE OF THE EXERCISE TIME, BECAUSE THE PRIORITY WILL ALWAYS BE FOR THE IRON EXERCISE, WHICH YOU WILL NEED ALL YOUR ENERGY FOR IN ORDER TO PERFORM YOUR EXERCISES WITH SUFFICIENT INTENSITY AND BE ABLE TO PROGRESS PROPERLY.

CARDIO DOES NOT REQUIRE CONCENTRATION OR HIGH ENERGY LIKE EXERCISE, BUT IT CONSUMES ENERGY STORES IN THE MUSCLES, SO IT IS BETTER TO LEAVE THIS ENERGY FOR YOUR EXERCISE, SO THAT IT DOES NOT AFFECT YOUR PERFORMANCE AND THEREFORE DOES NOT AFFECT MUSCLE GAIN.

IS THERE A DIFFERENCE IF I DO CARDIO ON AN EMPTY STOMACH?

INSTANTLY, FAT BURNING WILL BE MORE, BUT AS WE EXPLAINED IN THE NUTRITION SECTION, FAT IS NOTHING BUT STORED ENERGY, SO YOUR BODY WILL ALSO PREFER TO BALANCE ITSELF ON THE CALORIE EQUATION, MEANING THE DIFFERENCE IS ALMOST NOTICEABLE, BECAUSE IN THE END, FAT LOSS IS THE RESULT OF THE CALORIES YOU BURN BEING LESS THAN THE ENERGY. WHATEVER YOU CONSUME, CHOOSE WHAT IS MOST APPROPRIATE FOR YOUR LIFE AND DAY, AND WITH CONTINUITY, YOU WILL REACH YOUR GOAL.

TYPES OF CARDIO:

LOW INTENSITY:

THIS IS LIGHT INTENSITY CARDIO, SUCH AS USING A BICYCLE OR A TREADMILL.
YOUR HEART RATE WILL NOT BE VERY HIGH, AS ITS PHYSICAL IMPACT IN TERMS OF STRESS ON YOU AND THE RECOVERY PROCESS WILL BE MINIMAL.
THIS HAS THE ADVANTAGE THAT IT WILL NOT PUT EXTRA PRESSURE ON YOU. BUT THE PROBLEM IS THAT IT CAN LAST FROM HALF AN HOUR TO A FULL HOUR, AND MANY PEOPLE CAN GET TIRED OF THIS.

MEDIUM INTENSITY:

THIS IS MODERATE-INTENSITY CARDIO, AND IT BALANCES THE FIRST TWO TYPES SO THAT IT IS EFFECTIVE BUT SOMEWHAT ECONOMICAL AT THE SAME TIME.
AN EXAMPLE OF THIS TYPE OF CARDIO IS BRISK WALKING TO THE POINT OF LIGHT JOGGING.

HIGH INTENSITY:

THESE WILL BE PERIODS OF VARYING INTENSITY.
AN EXAMPLE WOULD BE THAT YOU RUN AT YOUR HIGHEST SPEED AND EFFORT FOR A MINUTE, THEN YOU WALK FOR A MINUTE, TAKING YOURSELF IN, THEN YOU RUN AT YOUR FASTEST SPEED FOR A MINUTE, THEN WALK FOR A MINUTE AFTER THAT, AND SO ON.

THE BEST TYPE FOR YOU WILL BE DETERMINED FOR YOU IN YOUR SYSTEM ACCORDING TO YOUR GOAL AND PREFERENCES, BUT BEFORE WE CONTINUE, LET ME SHARE WITH YOU A VERY COMMON MISTAKE IN PERFORMING CARDIO THAT REDUCES ITS EFFICIENCY AND WASTES YOUR TIME.

THERE ARE MANY PEOPLE WHO PREFER TO USE THE INCLINE TREADMILL

THIS IS SIMPLY BECAUSE YOU CAN PUT IN A HIGHER EFFORT AND BURN MORE IN LESS TIME, BUT YOU FIND THE PERSON LIFTING THE TREADMILL AND HOLDING THE SCREEN RIGID.
LET ME TELL YOU THAT YOU ARE UNDERESTIMATING YOURSELF. BECAUSE YOU HAVE GREATLY REDUCED YOUR EFFORT, THE SCREEN IS A HELPFUL FACTOR THAT WILL MAKE IT EASIER FOR YOU TO EXERCISE, BECAUSE YOU WILL NOT BE CARRYING YOUR FULL BODY WEIGHT, AND THUS YOU WILL NOT BURN THE CALORIES YOU IMAGINE.

THAT'S WHY KEEP YOUR MIND AND DON'T HOLD ON TO ANYTHING SO YOU CAN GET MORE OUT OF EVERY MINUTE YOU PLAY. IF YOU ARE NOT USED TO PLAYING IT, START GRADUALLY INCREASING THE INCLINATION OF THE TREADMILL UNTIL IT BECOMES EASIER FOR YOU.

Your cardio system:

Incline treadmill	**Type**
Post-workout	**Timing**
10 mins	**Duration**
steady state (90:120 B/M)	**Notes**
